Important: Just because the Type A connector from one USB version fits in the Type A connector from another USB version does not mean that the connected devices will work at the highest speed, or even at all.. 0, and USB 1 1 USB 3 0 Type A connectors are often, but not always, the color blue.

This means that the USB Type A plug from any USB version will fit into the USB Type A receptacle from any other USB version and vice versa.. That said, there are some significant differences between USB 3 0 Type A connectors and those from USB 2.

Some USB devices are so small that the cable isn't necessary In those cases, a USB Type A plug is integrated directly into the USB device.. This is typically how USB keyboards, mice, joysticks, and similar devices are designed.. The common flash drive is a perfect example USB Type A CompatibilityThe USB Type A connectors outlined in all three USB versions share basically the same form factor.. USB Type-A connectors are supported in every USB version, including USB 3 0, USB 2..
